

100% of EMS Users of the Vie Scope find it easy to use.

During training over 3 days in June 2020, over 150 members of a Capital City Fire Rescue Department intubated with the Vie Scope on difficult Airway manikins using the Midline, Paraglossal and the Tomahawk method. 98 took the time to give demographic information and answer a three-question survey. The demographic information recorded included their name, department, age, sex, level of education, and intubation experience.

The three questions asked about the Vie Scope” were:

1. Was the Vie Scope easy to use?
2. Was the Vie Scope easy to Learn?
3. Would you recommend the Vie Scope?

The process and results were as follows:

- Participants watched a 90 second training video: https://youtu.be/ttkDmLwX_2c
- All practiced the Vie Scope on 4 different Difficult Airway Manikins.
- Minimal training with the Vie Scope was provided, they were shown the roadmap to Intubation landmark mnemonic TEN – Tongue, Epiglottis, Notch - they were shown the vocal cords with the Vie Scope.
- First intubation attempts were with a Mac blade to identify how difficult the manikin was, then they intubated 5 times using the Vie Scope.
- Upon completion of successful intubation with the Vie Scope, the 3 question survey was completed.

Results:

Was the Vie Scope easy to use?

98 of 98 answered yes. 100%

Was the Vie Scope easy to Learn?

98 of 98 answered yes. 100%

Would you recommend to your EMS Service?

97 of 98 answered Yes. 99%
